

# GEO Citizen Science & Earth Observation Community Activity

## GEO symposium 2019

2020-2022 GEO Work Programme

2019-2020 GEO Work Programme

Citizen science activities are engaging citizens in collecting data (in-situ and other) that is of value both locally and globally. Through GEO citizen science and Earth observation community these data can be made interoperable.

The citizen science activities illustrate and capture how citizen science can augment, enhance, validate and exploit Earth observation for sustainable development, disaster reduction, climate change adaptation etc.

### Achievements 2017-2019

- Scoping and initiation of a global GEOSS Citizen Science inventory
- Reviewing and analyzing existing Citizen Science activities
- Specifying recommendations for Citizen Science to cover gaps in in-situ observations
- Providing guidelines for using and managing Citizen Science incl. interoperability
